

RUBRIMENT® Emulsion

Product information

Reg. No.: 10126
Size of package: 60 ml
Application: Emulsion.
For sale in pharmacies only.
Pharmaceutical product.

EFFICACY

The active ingredients nicotinic acid benzyl ester, nonylic acid vanillylamide, camphor and turpentine oil particularly promote the circulation of blood in the skin. A slight reddening and a feeling of heat in the skin are experienced after only a short while.

The salicylic acid-containing active ingredients are quickly absorbed into the suffused skin and particularly alleviate rheumatic complaints.

All of the active ingredients work together to ensure the quick alleviation of pain, the relief of muscle cramps and the promotion of healing by the stimulation of tissue metabolism.

The oily properties of **RUBRIMENT EMULSION** make it particularly suitable for massage treatment. The increase in blood flow produced by **RUBRIMENT EMULSION** promotes the strengthening of the musculature.

INDICATIONS

- Rheumatic diseases which affect the joints, muscles and nerves, e.g. chronic arthritis, lumbago and sciatica.
- Sports massage: to support warm-up activities and to provide relief in the case of aching muscles and muscle cramps, circulatory disorders affecting the hands and feet and mild frostbite.

INTERACTION, CONTRAINDICATIONS, PREGNANCY AND BREASTFEEDING

No interactions are known at present.

RUBRIMENT EMULSION should not be used:

- where there is known hypersensitivity to one of the ingredients of the preparation
- in infants and young children below the age of 2 (risk of laryngismus)
- in patients with bronchial asthma or other respiratory diseases which are accompanied by a marked hypersensitivity of the airways. The inhalation of **RUBRIMENT EMULSION** can cause shortness of breath or trigger an asthma attack.
- in diseases which cause inflammation of the skin
- in occlusion of the arteries
- in disorders which affect the small and smallest blood vessels in diabetics

Use during pregnancy and breastfeeding should only take place after prior consultation of a doctor.

WARNINGS AND PRECAUTIONS

Never allow to come into contact with the mucous membranes, open wounds or eyes. Please be sure to wash your hands carefully with soap after use (e.g. massaging with bare hand).

Report any pregnancy to a doctor. If symptoms persist or if use does not bring the expected results, medical advice should be sought.

Should be kept out of the reach of children.

DOSAGE, METHOD AND DURATION OF USE

Massage into areas of the body which are at risk or which are painful until the skin feels dry again and then wash your hands.

It is absorbed quickly, it is not greasy and leaves no residue on the clothes.
Shake before use!

RUBRIMENT EMULSION is usually massaged into the skin several times a day. Be sure to massage into the skin again once the effect has worn off.

SIDE EFFECTS

More severe skin reactions (burning and urticaria) can be experienced by hypersensitive patients (usually people with blonde or red hair). In such cases, the affected areas of the skin should be washed with cold water. An increase in the effect of the preparation is possible if hot water is used.

In infants and young children below the age of 2, **RUBRIMENT EMULSION** can cause laryngismus resulting in severe respiratory disorders.

Please immediately inform your doctor or pharmacist of any side effects, including side effects which are not mentioned here.

COMPOSITION

100 ml **RUBRIMENT EMULSION** contain:
2,0 g nicotinic acid benzyl ester
0,1 g nonylic acid vanillylamide
1,8 g hydroxyethyl salicylate
0,2 g salicylamide
3,0 g camphor
3,0 g turpentine oil

Isobornylacetate, cetostearyl alcohol (Type A) emulsifying, cetostearyl alcohol (Type A) emulsifying in addition to an emulsifier (Emulgade F), paraffin liquid and purified water are used as excipients.

PARTICULAR STORAGE INFORMATION

Pay attention to expiry date. Do not use after this date.
RUBRIMENT EMULSION should be stored sealed and protected from light. Do not store above room temperature (25 °C).
